

Enhance Visibility, Drive Safer and Save Money with QUIXX High Performance Acrylic Scratch Remover

Miami, FL, July 15, 2008 – Did you know that if the glass surface of a headlamp is dirty or scratched, the effective range of visibility is reduced by more than 50 percent, causing potential danger? As automobiles age and are exposed to sunlight, chemicals, pollution, and other environmental contaminants, the lenses on headlights can take on a yellowish translucent or opaque appearance. This yellowish discoloration depreciates the car's value and reduces the effective brightness and focus of the headlamps. A scratched motorcycle windshield or helmet visor poses the same risk. Dashboards and the wood trim around them also tend to get scratched easily and the cost of repairing all of these parts at a professional shop can reach way into the thousands of dollars. At a time when we are paying more than \$4 a gallon at the pump, few have this kind of money to spare.

QUIXX High Performance Acrylic Scratch Remover is the best and most cost effective answer to these problems. Created by the makers of the #1 rated QUIXX High Performance Paint Scratch Remover, **QUIXX High Performance Acrylic Scratch Remover** quickly and easily removes scuffs, scrapes and scratches from acrylic glass and Plexiglas® surfaces including car headlights, dashboard, wood trim, motorcycle windshields, RV or boat windows, and other acrylic household items. QUIXX High Performance Acrylic Scratch Remover restores surfaces to a scratch-free finish, making them look like new. It is now available for \$14.95 at fine retailers including Wal Mart, Pep Boys, AutoZone and Advance Auto.

HOW DOES IT WORK?

QUIXX High Performance Acrylic Scratch Remover works by lightly dissolving and polishing the scratched surface with fine abrasive particles. The edges of the scratches are rounded off and the gap left by the scratch is filled in. This returns the surface to its former smooth and shining glory.

Removing scratches from acrylic and Plexiglas® surfaces is quick and easy with QUIXX High Performance Acrylic Scratch Remover. Just apply the paste onto the cleaned scratched surface and rub for 2-3 minutes with the included polishing

cloth. For deeper scratches, wet sand the area with the 1600 grit sand paper included in the kit and then rub in the paste for 2-3 minutes.

Your car care woes can be literally vanished in minutes with QUIXX High Performance Acrylic Scratch Remover. So before you replace your headlights, dashboard or fork over hundreds of dollars for a lease-return, try out QUIXX High Performance Acrylic Scratch Remover and let the results help you keep the cash in your pocket.

MEAN & GREEN

Not only does QUIXX High Performance Acrylic Scratch Remover work miracles on your scratched acrylic and Plexiglas® surfaces, it is also environmentally friendly. It does not use volatile organic compounds (VOCs), which contain high vapor pressures that are harmful to the environment. VOCs, commonly found in household items such as paint, paint strippers, wood preservatives, plastics, and cosmetics, contribute to both indoor and outdoor air pollution. The exclusion of VOCs from QUIXX High Performance Acrylic Scratch Remover is not only good for the environment; it also helps the product perform better on your acrylic and Plexiglas® surfaces.

About QUIXX Care System

QUIXX Care System specializes in creating uniquely engineered products for the car care market. The company's star product, QUIXX High Performance Paint Scratch Remover, was rated the #1 scratch remover on the market by various national media outlets. It is also the recipient of the prestigious TÜV (Technical Inspection Agency, www.tuvusa.com) inspection certificate, which is presented to products that pass strict testing procedures. QUIXX High Performance Paint Scratch Remover was awarded the certificate based on its effectiveness, paint compatibility, environmental safety and other specific criteria. It is the first product in its category to receive this high accolade. QUIXX Care System was created by E.V.I. GmbH of Germany, which was formed in 1992 with a specific goal in mind: to find a way to effectively remove scratches from synthetic materials. The study of surface technologies is E.V.I.'s core competence and the company has launched several brands of scratch removers for different purposes under their umbrella including QUIXX High Performance Paint Scratch Remover, QUIXX Polish, QUIXX Wax, Displex and Xerapol. E.V.I.'s products are sold in more than 50 countries worldwide.
