

# QUIXX WIPER BLADE CLEAN AND CARE

## INSTRUCTIONS:

It is necessary to follow the instructions in exact order to obtain optimum results.

### A) Preparation:

Pull the wiper arms away from the windshield. In some car models there is a special wiper position for this,

or you may need to raise the hood in order to avoid any damage to the paintwork. If unsure, follow the instructions from your vehicle owner's manual.

### B) Cleaning and maintenance of your wiper blades:

1. Shake bottle well before use.
2. Moisten a small area of the cloth with QUIXX Wiper Blade Clean + Care. To do so, spray the cloth 3 to 5 times at a distance of about 3 inches.
3. Rub the entire length of the rubber wiper blade 3 to 5 times with the moistened cloth in order to apply the care fluid and remove contamination.
4. For optimum care of your wiper blades, the cleaning process should be carried out every 4 weeks.
5. Do not forget the rear window wiper (if applicable).

### C) Cleaning the Windshield:

1. Place 1 to 2 quarts of warm water and a few drops of dishwashing liquid in a suitable container.
2. Clean the windshield with the water mixture and the special sponge provided, paying particular attention to the area where the wipers come to rest when not in use.
3. Rinse the windshield with fresh, clean water in order to remove any residues resulting from the cleaning process.

**WARNING:** Do not spray QUIXX Clean & Care solution into the eyes. Only use the cleaning sponge on the windshield, and never on the paintwork of the car.
